-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 15-28 are rejected under 35 U.S.C. 103(a) as being unpatentable over British Patent to Davidson et al. (2345208).

Regarding Claims 15-17,20,21, Davidson et al. show in Figures 1,2a-2c,3a-3g and 7-9, an antenna device 20 for a portable radio comprising a carrier 23 of insulating material, and being fixable on a circuit card 10 of the radio, and supports a radiator 21 disposed within a groove and having a contactor device 22 in Figures 2b and 2c, the carrier 23 having an accommodation space (such as 26a in Fig. 2c). Although the radiator conductor 21 is shown disposed along the top surface thereof from the contact 22 to an end remote thereof, it would have been obvious to the skilled artisan to provide the radiator at the remote end. Alternatively, notice in Fig. 1, that at least portions of the antenna radiator are located at the end of the carrier remote from the card 10.

Further, regarding Claim 17, Fig. 4 shows at least portion 24 forming projections as claimed.

Regarding Claims 18 and 19, Fig. 8 shows a variation of the basic invention and resilient snap members 813 as claimed.

Regarding Claim 22-26, Figures 4 and 5 show a generally T shaped radiator with a portion connected to the contactor. Shaping of the radiator is purely a matter of obviousness as the choice is dependent upon radiation characteristics such as pattern, frequency, matching and band of service.

Regarding Claims 27 and 28, the antenna elements shown in Figures 1 and 3a are comprised of parallel spaced radiators that branch from the feeder.

3. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Michael C. Wimer whose telephone number is (571) 272-1833. The examiner can normally be reached on M-F.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Minsun O. Harvey can be reached on (571) 272-1835. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
